Chat History

ANISH GORAKAVI PERSONAL WEBSITE / DESIGN + IMPLEMENTATION

This transcript contains the visible user requests and assistant responses from the current chat through the PDF export request. Hidden system instructions, private reasoning, and internal tool logs are excluded. Attachment filenames and available visual references are preserved.

USER

Files mentioned: anish-gorakavi-profile.md

Based on this document, generate a React website that will export to static HTML, CSS, and JavaScript, as it will be SCP'd to an Apache server. Make it neon blue with a fusion of 2000s skeuomorphism and 2020s neomorphism with a hacker aesthetic.

Attachment: anish-gorakavi-profile.md (source profile document; not embedded as an image)

ASSISTANT / PROGRESS

I'll read the profile and check the workspace, then build a neon-blue React site that exports static HTML, CSS, and JavaScript for Apache.

ASSISTANT / PROGRESS

I'm using the Sites building workflow for the design process, with a static export for your Apache server. The visual direction is a dark workstation: electric-blue accents, glossy hardware-style controls, softly recessed panels, and terminal details. I'll use the document as biographical source material and follow your requested aesthetic over its embedded design suggestions.

ASSISTANT / PROGRESS

The site is built around your projects, background, and book, with concepts and prototypes clearly labeled. The export also includes pre-rendered HTML, so visitors can read the content before React loads, and Apache does not need a Node server or routing rules.

ASSISTANT / FINAL

Built and verified your React site with neon blue accents, glossy controls, recessed panels, and terminal styling.

The ready-to-upload files are in dist. Upload its contents to Apache with:
scp -r dist/. username@server:/var/www/html/

Rebuild after edits with npm run build. No Node server required.

USER

Remove 'I grow roses,' and capitalize AG. For the Cyber Essentials for Teenagers title, I want it shaped like a book with a blinking neon cursor and an Amazon link to my book: https://www.amazon.com/dp/B0FH1SCD16

ASSISTANT / PROGRESS

I'll remove the roses reference, capitalize the AG monograms, and turn the publication graphic into a book-shaped cover with a blinking neon cursor and an Amazon link.

ASSISTANT / FINAL

Done - removed the roses reference, capitalized AG, and added a book-shaped cover with a blinking neon cursor. The cover and Amazon button link to your book. Rebuilt the Apache-ready files in dist.

USER

Make the buttons neon dark. They should not look like mid-2000s Bootstrap 2 UI.

ASSISTANT / PROGRESS

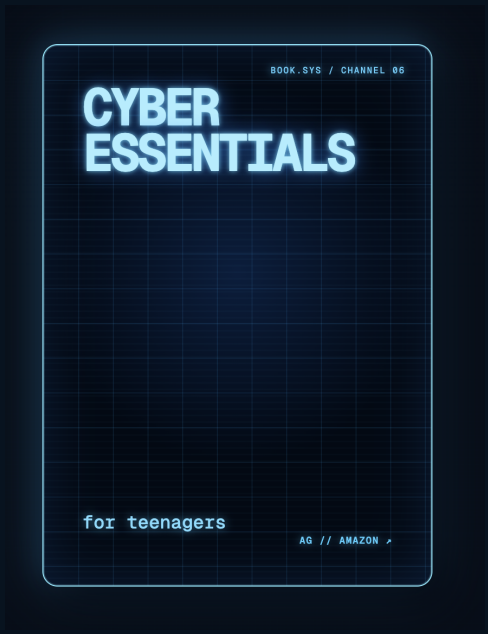

I'll replace the glossy blue buttons with dark surfaces, crisp neon borders, and restrained glow so they feel sharper and more current.

ASSISTANT / FINAL

Updated all buttons to dark navy surfaces with thin neon-blue borders, lighter typography, and subtle hover glow. Removed glossy gradients and raised bevels. Static export rebuilt in dist.

USER

I want the book to look like this, with a bit of depth.

Book-cover visual reference supplied by the user

ASSISTANT / PROGRESS

I'll match the reference's cyan grid, glowing uppercase title, and monospace labels, with subtle edge thickness and shadow for depth. I'll keep the blinking cursor and Amazon link.

ASSISTANT / FINAL

Updated the book to match your reference: glowing cyan typography, grid and scanlines, rounded neon border, and subtle 3D depth. Kept the blinking cursor and Amazon link. Static export rebuilt.

USER

Add a dropdown section for Academic Goals & Successes.

As a computer science student at The University of Texas at Austin, I want to take advantage of UT's strong CS community to explore systems, cybersecurity, networking, and the intersection of computing and neuroscience. My coursework in areas such as data structures and algorithms has strengthened the way I approach complex problems, while UT's labs, student resources, and technical community have given me opportunities to experiment beyond the classroom.

My goal at UT is not just to earn a degree, but to leave with a deeper understanding of how computers work, from algorithms and software to operating systems and hardware. I hope to use that foundation to contribute to research, ambitious technical projects, and eventually work that connects my interests across computing, security, and neuroscience.

Beside it, generate an animated ASCII Bevo running with orange terminal color.

Texas Longhorn / Bevo visual reference supplied by the user

ASSISTANT / PROGRESS

I'll add an expandable 'Academic Goals & Successes' section with your text, alongside an orange terminal showing a running ASCII Bevo.

ASSISTANT / PROGRESS

The section is in place with both paragraphs and the running orange ASCII Bevo beside it. I've also added a pause button and reduced-motion support.

ASSISTANT / FINAL

Added the expandable Academic Goals & Successes section with your text and an orange animated ASCII Bevo alongside it. Includes pause/resume, reduced-motion support, and a mobile layout. Static export rebuilt.

USER

Change the ASCII Bevo animation so Bevo is facing directly toward the viewer and running forward, rather than moving horizontally from left to right. Keep Bevo centered in the terminal area. Animate the run by alternating the front-facing leg positions and adding a subtle up-and-down body bounce to create the illusion that Bevo is charging/running toward the screen. The horns, head, and body should remain recognizable as a Texas Longhorn from the front. Do not translate Bevo horizontally across the container. Keep the existing ASCII/terminal aesthetic and burnt-orange styling. The animation should feel playful and subtle, not aggressive or distracting.

ASSISTANT / PROGRESS

I'll redraw Bevo from the front with wide horns and alternating leg positions, keep him centered, and use only a gentle vertical bounce for the run.

ASSISTANT / FINAL

Bevo now faces forward and stays centered, with alternating front legs and a gentle vertical bounce. Removed sideways ground movement and kept the orange terminal styling and pause control. Static export rebuilt.

USER

Make the window around Bevo neon blue.

Bevo terminal screenshot supplied by the user

ASSISTANT / PROGRESS

I'll change only the Bevo terminal's outer window chrome to neon blue, while keeping the ASCII art and terminal text burnt orange.

ASSISTANT / FINAL

Updated the Bevo terminal window with a neon-blue border, blue dividers, and a restrained blue glow. The ASCII Bevo and terminal text remain burnt orange. The static export in dist is rebuilt and ready.
